3. PRODUCT DESCRIPTION

PROFLEX Vinyl Expansion Joints are manufactured from 100% recycled vinyls with fabric strand reinforcement that are obtained from the automotive and roofing industries. PROFLEX is an extremely durable and flexible product that is easy to handle and will not rot or become brittle when exposed to the weather. Because of its flexibility, it will not break, split or crack when exposed to the elements. PROFLEX is UV stable, does not use adhesive binders in the manufacturing process, and can be stored outside.

4. APPLICATION

Ideal for any concrete application requiring an expansion/isolation joint filler such as: sidewalks, driveways, parking lots, swimming pools, curbs, gutters, and as a sill plate in residential homes, garages, and in industrial buildings. Because of its flexibility, PROFLEX can be used as a radius filler as well as a concrete form.

5. SPECIFICATIONS (Stock Sizes)
